

Karl Zeus A.

Luau Developer

ABOUT ME

3 years of Luau engineering experience, building robust backends with high uptimes, bug and memory leak patches, improving server lifetimes and performance optimizations. Legacy systems, spaghetti systems, cursed codebases are common for me. Front-end skills are sufficient to deliver a high quality and immersive UX.

TECHNICAL SKILLS

Language: Luau

Tools: Roblox Studio, Git,, Github, Rojo, Wally, Argon, Visual Studio Code

WORK HISTORY

Fullstack Programmer, Grow Games

February 2026 – Present

Develop gameplay systems for live Roblox experiences, modernize legacy codebases, and improve performance and maintainability.

- Crazy Chefs: Migrated messy codebase to a custom dependency-injected framework, heavy performance optimizations, memory leak patches, mobile UX improvements.
- Brainrot Bounties: Full end-to-end programming, plot system, responsive combat system, shop system.

LiveOps Programmer, IndigoVC

December 2025 – August 2026

Maintain and improve multiple live Roblox experiences through gameplay programming, datastore reliability, performance optimization, and rapid production debugging while supporting frequent content updates.

- Shoot the Brainrots: Reworked data persistence with ProfileStore to prevent data loss/softlocks; led first response to a critical data-loss incident; patched item duplication exploits; cut server memory growth ~2.6x and improved compute efficiency by 71%.
- +1 Speed Bridge Building: Diagnosed a client crash spike and fixed it by distributing bridge loading across frames, reducing client crashes by 73%; resolved high-speed character instability with dedicated hitboxes.

Freelance Roblox Programmer

2024 – 2026

Delivered commissioned gameplay systems and technical solutions for independent Roblox developers, working directly with clients from planning through implementation. Created diverse systems involving trading, directional combat system, resource gathering, recreating Squid Game minigames, dev products gifting.
